

Microsoft Exchange Migration

A **national Brewer** located in the Pacific Northwest region of the United States recently purchased another company and needed to **consolidate the two organizations' email platforms**. At the same time, they needed to **transition from their Exchange Server from a hosted Exchange provider to Office 365**. The Head of IT had worked with Abtech on an IT project at a previous employer and had been very happy with the work we did, so he reached out for help with this project. Abtech's engineers successfully **migrated 250 mailboxes from 4 hosted Exchange servers to Office 365**. We were able to also consolidate and simplify their email environment making it easier to maintain.
