

Microsoft Teams Deployment

San Francisco Regional Occupational School

A **San Francisco Regional Occupational School** needed to set up Teams for distance learning. With short notice, **Abtech set up accounts for over 1,500 students**, the **licenses for the accounts**, and **provided Microsoft Teams training for staff and students**. Working with the school IT staff, we were able to **deploy Microsoft Teams** and ensure that students could connect to their online classes.

IT Service Provider

An **IT service provider** was approaching the end of life for Microsoft Skype for Business in mid 2021 and needed to transition to a newer, more relevant communication channel that had more ability than the run-of-the-mill chatting portal. They decided to transition to Microsoft Teams and asked Abtech to **design and implement a Microsoft Teams environment for 55 people, encompassing multiple departments (engineers, sales, accounting, and administration) throughout 12 states**. This new environment provided the company the best set of tools available and utilized **SharePoint, Outlook, VOIP, and networking**.
